Allowable Subject Matter

1. Claims 5-10, 13 and 38 would be allowable over prior art.
2. The following is an Examiner's statement of reasons for the indication of allowable subject matter based on Amendment filed on March 25, 2011:

Regarding Claims 5 and 13, the prior art of record fails to teach or fairly suggest an optical pickup comprising following underlined features:

an aberration generation device configured to generate coma aberration or spherical aberration for the first light beam or the second light beam focused by the objective lens; and

a control device configured to determine which of the first and second optical recording media is set and to perform a first control operation when the first optical recording medium is set or to perform a second control operation when the second optical recording medium is set; wherein the first control operation comprises: a first step of setting a quantity of the coma aberration generated by the aberration generation device to a predetermined stored value, a second step of varying a quantity of the spherical aberration generated by the aberration generation device to determine and store a driving condition of the aberration generation device, wherein the driving condition

Art Unit: 2627

is a condition for which an amplitude of a recording information signal or a track error signal is at a maximum, and a third step of performing an operation of recording or reproducing while a quantity of the spherical aberration is added based on the driving condition; and wherein the second control operation comprises: a fourth step of setting a quantity of the spherical aberration generated by the aberration generation device to a predetermined stored value, a fifth step of varying a quantity of the coma aberration generated by the aberration generation device to determine and store a driving condition of the aberration generation device, wherein the driving condition is a condition for which an amplitude of a recording information signal or a track error signal is at a maximum, and a sixth step of performing an operation of recording or reproducing while the quantity of the coma aberration is added based on the driving condition, wherein the aberration generation device is controlled by the control device, wherein the objective lens is a lens providing a best aberration for the first optical recording medium and is provided with an aberration compensation element comprising a diffraction element or a phase shifter element between the objective lens and the aberration generation device.

The features indicated above, in combination with the other

Art Unit: 2627

elements of the claims, are not anticipated by, nor made obvious over, the prior art of record.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
